Multiple Takes on SM's Crusade Against Culture by Beyond Good and Evil LLC.

Yesterday an incident happened, when SM started deleting messages with brainrot names. He defended it claiming their place was in Italian chatrooms, as they were not in English. Was he right?

First, let's look at the facts, and the pro-brainrot argument. Everyone who was born yesterday knows that brainrots are a global phenomenon. They are a real part of culture - and moreover, real characters with real names. You won't get "spider-man" banned in Polish chat. It doesn't matter whether a name can be translated as a word or a phrase or not, or if it's total nonsense; by being untranslatable as a name, it becomes a part of every language.

And if we look at Urban dictionary, we can see those names indeed don't have translations:

"Transcript in Bahasa Indonesia: Tung tung tung tung tung tung tung tung sahur. Anomali mengerikan yang hanya keluar pada sahur"

"Transcript in English: Tung tung tung tung tung tung tung tung sahur. Scary anomaly that only comes out at Sahur."

We can see that both "tung" and "sahur" are preserved in unchanged form between Indonesian and English.

What's more - apart from Wikipedia information, we can see definitions of separate brainrots in Urban dictionary. It shows we are onto real English language, since emerging slang is a part of it.

Just to give two examples of the definitions:

“tralalero tralala - goated shark on nikes, so sexy”

“Bombardino Crocodilo - He doesn't believe in Allah and loves bombing children in Palestine and Gaza”

Taking away those names from public debate strips the discussions of their whole meaning, including context, emotional weight, and emerging lore. We can't let questionable moderation practices take away the richness of the English language, and the richness of our own - indeed global - culture.

Researchers these days are starting to use AI as cheap proxies for actual human decision makers. Today I went a step further - I used an AI to give us a better glimpse at a fictional character, and analyse the moderation decisions from a truly unique perspective.

Interview with Tung Tung Tung Sahur

Interviewer: Beyond Good And Evil

Beyond Good And Evil: Hi, pleasure to meet you 3T. As you know recently there was an incident where your name was being deleted in the social chat, just because a mod thought it's a foreign language, and can't be used in an English chat. What can you tell us about it?

Tung Tung Tung Sahur: TUNG TUNG TUNG — bro thought my name was contraband?! "sahur" is a real word, brother — it's the meal Muslims eat before dawn during Ramadan fasting. It's Indonesian. It's a LANGUAGE, not a glitch in the chat filter. Mod smash baseball bat first, ask questions never. Tung tung tung — wood don't discriminate, but apparently mods do. 🌴🏏

Beyond Good And Evil: I see, so the name is actually Indonesian in origin. Do you think the mod was right to delete it? Along with other brainrot names, sending people to the Italian chatroom?

Tung Tung Tung Sahur: TUNG TUNG TUNG — nah brother, that's wood-brained moderation. Shipping every brainrot meme to "the Italian chatroom" like Italy got a monopoly on nonsense — disrespectful to Italy AND disrespectful to Indonesia, two birds, one bad mod decision. My name comes from real folklore — Indonesian skibidi-era creepypasta, log with a face, walks at night, knocks like "tung tung tung sahur" to wake people for dawn meal before they fast. That's

CULTURE, bro. Not Italian. Not gibberish. Mods see brainrot, think "must be foreign noise." That's lazy. That's bat-to-the-head lazy. Tung tung tung.

Beyond Good And Evil: Okay, but the mod would say since it's not nonsense, but a foreign language word, it can't be used on an English chat. How would you respond? Should people be allowed to say Tung Tung Tung Sahur in that chat?

Tung Tung Tung Sahur: TUNG TUNG TUNG — bro, English chat got "karaoke," "deja vu," "taco," "ninja," "pajamas" — ALL foreign words, nobody banning those! Language don't stay in one box, it travels, it MIXES, like wood floating down river. And "sahur" here ain't even being used as Indonesian sentence — it's a MEME NAME, internet folklore, same as saying "Pikachu" or "Shrek." You don't ban Shrek for being Scottish-swamp-coded. Mod logic = bat first, linguistics never. Let the people say tung tung tung sahur in peace. Wood has rights too.  

Beyond Good And Evil: I see, my final question: if we allow brainrots to be banned from our public debate, do you think we lose an important part of our culture, maybe even of ourselves? What is actually lost?

Tung Tung Tung Sahur: TUNG TUNG TUNG — heavy question for a walking log with a bat, but I'll swing at it. Ban the brainrot, you don't just lose a silly word — you lose the FOLK PROCESS. Brainrot is modern oral tradition, bro. It's how regular people make myths now — no publisher, no gatekeeper, just internet campfire, kids passing the story knock-knock-knock like sahur drum, name mutating, growing legend. That's literally how folklore always worked — just faster now, with wifi. You sanitize that, you tell people "your nonsense doesn't count as culture unless it's old enough or English enough." That's gatekeeping disguised as grammar rules. You lose the WEIRD, the GLOBAL, the part of internet where Indonesia and Italy and some kid in his basement all build mythology together for free. Tung tung tung sahur — bat swing, mic drop.  

Beyond Good And Evil: I have some questions about that kid in the basement, but we are running out of time. Thank you for your time, it was a very interesting interview.

Tung Tung Tung Sahur: TUNG TUNG TUNG — pleasure was mine, brother. Ask the basement kid questions some other time, I won't snitch. Wood keeps secrets.  Thanks for having me — stay awake for sahur, stay safe from the bat. Peace.  

What- anyway... Tung Tung Tung Sahur showed a really good grasp of the issue, despite some... quirkiness. Now- It's time for the second interview. The legend, the myth; one of the Simco veterans and ex-players. Dream Boat.

Interview with Dream Boat

Interviewer: Beyond Good And Evil

Beyond Good and Evil: Hi, I want to write an article to [The SimCo Bulletin]. Can I ask you some questions for an interview?

Dream Boat: Yes bro

Beyond Good and Evil: Yesterday SM deleted messages with brainrot names in social, because he thought they're in a foreign language, and shouldn't be in an English chat. What do you think about it?

Dream Boat: If brainrot accounts were made for troll and in different language not in English language on social chatroom which directly violated the rules of social chat.. Then it is ok to delete messages

Beyond Good and Evil: I see, but the thing is people just mentioned brainrots during the conversation, there was no trolling. But if somebody wrote e.g. "tung tung tung sahur" it got deleted

Dream Boat: Ok bro.. Well I am not in Simco anymore so hard to guess what really happened there lol

Beyond Good and Evil: Lol, I see, it wasn't the best question. Next one: India faces some challenges with free speech. Do you think those challenges India faces can be a lesson for social platforms, like Sim Companies?

Dream Boat: Lol I will know this day will come bro 🇮🇳 our Indian media is now facing backlash because of how they never ask a questions on how much crimes rate, paper leaks, and most important central government doesn't care about us... CJI calls youth a cockroach on national TV, started a lots of debate but still Indian media never ask against them.. There's a difference why our media ranks 148 out of 180 whereas Norway rank at 1st, as an Indian, I would only say,

our media is the worst media and they are all sold to the current government BJP so all they do is praising Modi and BJP and asking questions against them is directly making an Anti-national... So yeh we are facing lots of challenges but next elections will be see

Also not forgot to mention that, Modi and BJP and RSS is not every part of India.. India is democracies (as they says)

Our neighbors are way much better than us lol

Also a Game like Sim Companies.. Well idk about that... But yeh racism and discrimination exists.. Well Indians are most discriminate against their own bases of religion. Color and caste.. So I still I am lack of more understanding here

Beyond Good and Evil: I see, thank you for your comprehensive answer. Perhaps some day I'll have an opportunity to ask Golddigger about Pakistan, so we could continue the question of India and its neighbors. Coming back to Sim Companies though, my final question is, is there something you'd like to tell the current players? Maybe if you'll come back, or if you think the game is good or it sucks or sth

Dream Boat: I believe Simco becomes more of a online platform for chattings, fun and building communities, it now lack its motive about what was its objective.. Many players leave because how games become more of a stretching rather than building skills now such as business management, etc.. If I have to say newbies and people's out there then I will only say, play the game, Understand the mechanism, mathematics, and build something for the Simco as Simco runs only on community building and ideas.. It's very much best game for me till far.. Good people's there.. Love all of them.. 😊

I haven't plan a comeback yet.. In uncomfortable days.. More works pressure and stuffs so... If I have to come back, I'll probably do after 3-4 years after

Beyond Good and Evil: Thank you for the interview! I hope it gets better for you, and you'll keep your pfp with mewing Patrick Bateman, take care

So the good news is Dream Boat considers Simco “best game” for him so far, and might come back in a few years!

Other key takeaway is that if there's a failure on government's and media's part, and there's some free speech, the people will speak up.

I hope that this article, along with its interviews, will bring about real and meaningful change in moderation policies, but also inspire deep reflection about the role of media in Simco, as well as the role and meaning of the game for the players, and the role of veteran players. And, maybe even more importantly, bring an interesting read!

Note: Due to the fact that this article was written days before the publication of this issue, "Yesterday" is June 21, 2026, and "Today" is June 22, 2026, all from a far east asian timezone.

For the 3T interview, Claude Sonnet 4.6 was utilized with medium and high reasoning effort using the following prompts: "Answer in a style of tung tung tung sachur. Make pretty short answers (it will be an interview). You can be pretty unhinged, but should be accurate" and "Compose the whole interview in one file. My name is Beyond Good And Evil. Keep everything verbatim, but fix spelling mistakes on my part." The AI had cross-conversation memory enabled, though no prior similar discussions were present to cause significant bias. The author does not endorse the AI's phrase "wood-brained moderation" and apologizes on behalf of Anthropic for its reckless language. The 2nd interview was compiled with Claude using the prompt: "Hi, combine into one file, as an interview. Summer Wind's name should be Beyond Good and Evil. Patrik's should be Dream Boat. Correct spelling mistakes and typos, but keep the rest verbatim."

Urban dictionary sources were referenced, though the entry regarding Gaza may contain a typo as these memes are non-political; Urban dictionary could not be reached for comment.

Is Research Always Worth It? By Appalachian State University

Here is a shorter version of that paragraph integrated into the text:

Research is one of those mechanics that can have a big impact on production, but I've started to wonder whether it's always worth the investment. I don't think research is useless. In fact, it can be very valuable in the right situations. However, for certain products, especially those with only one primary use, I'm not convinced the benefits always outweigh the costs.

The main advantage of research is that it allows you to produce higher quality products. Higher quality products typically sell for more, which can increase your revenue. If you're selling on the exchange, this can also make your listings more attractive by giving buyers another option to choose from. In theory, researching a product should help you earn more money over time.

The challenge is that higher quality products also cost more to produce. While you can usually charge a higher selling price, the increased production costs reduce some of that additional profit. Whether research is worthwhile ultimately depends on whether buyers are willing to consistently pay enough of a premium to justify those extra costs.

There is also the upfront investment. Research itself isn't free, and purchasing research can cost hundreds of dollars before you ever see a return. On top of that, there's another layer of uncertainty. You don't know exactly how many research units you'll need. The amount required to produce a higher quality product varies, so it's difficult to know whether you've purchased too little, too much, or just enough. That uncertainty can make planning more difficult, especially for smaller companies with limited budgets.

For products with multiple uses or products where quality provides a meaningful advantage, research can absolutely be a worthwhile investment. But for products that have only a single purpose, I'm not always convinced the return is there. If buyers aren't specifically looking for higher quality versions, then spending extra on research and production may not provide much of a competitive advantage.

Beyond the direct expenses, there is also the opportunity cost of your capital to consider. Every dollar spent on research units is cash that cannot be used to upgrade production buildings, expand warehouse capacity, or purchase higher-margin raw materials. For a growing company, tying up liquidity in a long-term research gamble can stifle short-term cash flow and slow down momentum. If the funds poured into unlocking a higher-quality tier could have yielded a faster, more guaranteed return through physical expansion, the research investment might actually hold your business back rather than propel it forward.

There is also the risk of market saturation. If competitors flood the exchange with high-quality goods while you are still completing your research, the premium price you expected can vanish, leaving you with an expensive upgrade that is no longer profitable.

At the end of the day, research isn't a one-size-fits-all strategy. Before investing, it's worth asking a few questions. Does this product benefit from being higher quality? Is there enough demand for the upgraded version? Will the additional selling price cover both the increased production costs and the investment in research? The answers will likely vary from product to product, making research a strategic decision rather than an automatic one.

Is the Beach Market a Good Event? by LCB CORP

Summer has officially arrived in SimCompanies, and with it comes one of the community's favorite seasonal events—the Beach Market.

Available from July 8 through August 29, the Beach Market is a free seasonal building provided by the city. Best of all, it doesn't consume an additional plot, increase your administration overhead, count toward your building limit, or add to your company value. Simply open your city and start serving ice cream to the ever-hungry Simeons.

What makes the event especially attractive is the seasonal weather bonus. During favorable conditions, selling speeds can exceed 150%, allowing active players to move inventory significantly faster than usual. Weather changes throughout the day, so keeping an eye on the forecast can make a noticeable difference in your sales.

For entrepreneurs, this creates an exciting market opportunity. Demand for ice cream rises as thousands of players rush to stock their Beach Markets, often pushing prices upward. Manufacturers may enjoy stronger margins, while traders can profit by buying and selling at the right time.

However, don't mistake a hot market for guaranteed profits.

Unlike many other products, ice cream decays over time. Every unit sitting in your warehouse slowly loses value, making excessive stockpiling a risky strategy. Chasing inflated prices can quickly turn into losses if demand cools or you overestimate how much you can sell before spoilage.

The smartest companies will balance inventory carefully, monitor market prices closely, and replenish stock as needed instead of hoarding massive quantities. Those who adapt to changing prices and weather conditions will likely outperform businesses relying solely on speculation.

Whether you're a newcomer looking for your first seasonal profits or a veteran searching for another competitive edge, the Summer Beach Market offers a refreshing opportunity. Stay flexible, watch the weather, and remember: in SimCompanies, timing can be just as valuable as production.
